TO: ATTACHED MAILING LIST

TENTATIVE EMERGENCY CONDITIONAL WAIVER OF STATUTORY REQUIREMENTS TO FILE A REPORT OF WASTE DISCHARGE AND TO ADOPT WASTE DISCHARGE REQUIREMENTS FOR MANAGEMENT AND DISPOSAL OF SOLID WASTE FROM WILDFIRES

Enclosed are tentative Waste Discharge Requirements (WDRs) for the above subject.

The California Regional Water Quality Control Board requests that you review the enclosed documents and provide us with your written comments no later than **January 18, 2010**. Comments received after that date cannot be given full consideration in preparation of the recommended Board Order to be presented to the Regional Board for adoption at the meeting scheduled for **March 10 and 11, 2010**.

If you need further information, please contact me at (760) 241-7306.

Sincerely,

Rebecca Phillips
Office Technician

Notice
Submittal of Written Material for Regional Board Consideration

In order to ensure that the State of California Lahontan Regional Water Quality Control Board has the opportunity to fully study and consider written material, it is necessary to submit it at least ten (10) days before the Regional Board Meeting. Pursuant to Title 23 of the California Code of Regulations, Section 648.2, the Regional Board may refuse to admit written testimony into evidence unless the proponent can demonstrate why he or she was unable to submit the material on time or that compliance with the deadline would otherwise create a hardship. If any other party demonstrates prejudice resulting from admission of the written testimony, the Regional Board may refuse to admit it.

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LAHONTAN REGION**

BOARD ORDER NO. R6V-2010(TENTATIVE)

**AN EMERGENCY CONDITIONAL WAIVER OF STATUTORY
REQUIREMENTS TO FILE A REPORT OF WASTE DISCHARGE AND TO ADOPT
WASTE DISCHARGE REQUIREMENTS FOR MANAGEMENT AND DISPOSAL OF
SOLID WASTE FROM WILDFIRES**

The Executive Officer of the California Regional Water Quality Control Board, Lahontan Region (Lahontan Water Board) finds:

1. Wildfires have occurred throughout the Lahontan Water Board Region (Region) in the past and resulted in damage or destruction of many structures, including private and public property. This destruction may produce a very large volume of solid waste consisting of, or containing, pollutants that could affect the waters of the state. The nature of these wastes include, but is not limited to, burn ash, concrete, wood, green waste, electrical appliances, computer equipment, dead animals, food items, cars, chemicals, paint, refrigerators, etc. These wastes are collectively referred to as fire debris.
2. The Governor may issue a proclamation that identifies an area devastated by wild fires as being under a "State of Emergency."
3. Fire debris derived from the cleanup of such burned areas under a Governor-declared State of Emergency (emergency/disaster related waste) may be taken to five active Class III lined landfills for disposal and are listed in Finding No. 5 below and are located in Los Angeles or San Bernardino Counties.
4. Composite liner systems that are required for discharges of municipal solid waste (MSW), pursuant to State Water Resources Control Board (State Water Board) Resolution No. 93-62, or engineered alternatives to those prescriptive standards, satisfy minimum containment standards for Class III MSW landfills promulgated in State Water Resources Control Board regulations governing discharges of designated waste (California Code of Regulations, title 27, sections 20260 and 20310).
5. The following active Class III MSW landfills (and respective owners) in Los Angeles and San Bernardino Counties in this Region have engineered composite liner systems and leachate collection and removal systems, pursuant to waste discharge requirements implementing California Code of Regulations (CCR), title 27; State Water Resources Control Board Resolution No. 93-62; and federal MSW landfill criteria in title 40, Code of Federal Regulations, Part 258:

Victorville Class III Landfill	04-027	San Bernardino County

6. Temporary waste staging areas are portions of MSW landfills, inert landfills, or other designated areas where fire debris is temporarily discharged, stored, treated, or sorted for recycling, and where containment features and ancillary features for precipitation and drainage control are present. Temporary waste staging areas are temporary waste management units, and their condition for removal is described in Section B.1. of this Order.
7. The owners/operators of the Class III MSW landfills identified in Finding 5 of this Order may find it necessary to establish temporary waste piles for purposes of waste staging at their facilities to facilitate the emergency cleanup and disposal of fire debris.
8. Other agencies and jurisdictions or persons engaged in cleanup of burned areas may find it necessary to establish temporary staging areas and temporary waste piles for short-term storage and treatment of fire debris from the cleanup of burned areas. These staging areas may not necessarily be located at MSW landfills or inert landfills.
9. Fire debris consists of or contains two or more categories of wastes (e.g., non-hazardous solid wastes, household hazardous wastes, universal wastes, or inert wastes) that have been damaged and mixed such that the individual waste components are not practicably separable for purposes of waste management. Wastes from cleanup of property damaged by fire are often referred to as "mixed wastes."
10. Non-hazardous solid waste is defined in CCR, title 27, section 20220.
11. Universal waste is defined in CCR, title 22, section 66261.9.

12. Inert wastes (CCR, title 27, section 20230) may include uncontaminated demolition debris (e.g., concrete, brick, wood, and metal) that are suitable for recycling or reuse. Such wastes do not require permanent disposal at an MSW landfill.
13. Application of the requirements in Statewide General Construction Stormwater Permit, Order No. 99-08-DWQ, pertaining to best management practices that will prevent construction pollutants from contacting stormwater and will prevent products of erosion from moving off site into receiving waters, is relevant and appropriate for temporary fire debris staging areas.
14. Material used to cover waste piles at temporary waste staging areas shall adequately minimize rainwater infiltration; control fugitive dust, vectors, odors, and blowing litter; and prevent scavenging.
15. Any material classified as a designated waste cannot be used for daily cover (CCR, title 27, section 20705, subdivision (e)[1]).
16. Under the provisions of the California Water Code (Water Code), section 13269, subdivisions (c)(1) and (d), it is in the public interest to waive issuance of waste discharge requirements for the expeditious management and disposal of solid wastes resulting from the cleanup of burned areas, provided that certain conditions are met.
17. Granting conditional waivers of Water Code, section 13260, subdivisions (a) and (b); section 13263, subdivision (a); and section 13264, subdivision (a) would enable the Lahontan Water Board staff resources to be used more effectively during the state of emergency.
18. A temporary conditional waiver of the requirements set forth in Water Code sections 13260, subdivisions (a) and (b), 13263, subdivision (a), and 13264, subdivision (a) for the discharge of fire debris derived from cleanup of burned areas as a result of wildfires, and for short term discharges to temporary waste piles, would be in the public interest because these discharges: (1) would comply with the conditions of this Order, (2) would be effectively regulated by other public agencies, and (3) would not result in violation of the Water Quality Control Plan for the Lahontan Region (Basin Plan) (Water Code section 13269, subdivision [d]). Furthermore, adoption of a conditional waiver would be in the public interest because this action helps to facilitate the expeditious cleanup of burned areas in response to the Governor's declared State of Emergency.
19. Waiver of reports of waste discharge and issuance of waste discharge requirements are categorically exempt from the California Environmental Quality Act (CEQA) documentation because the waiver applies only to emergency activities in a disaster area in which a state of emergency has been proclaimed by the Governor (CCR, title 14, section 15269).

THEREFORE BE IT ORDERED THAT, pursuant to Water Code, section 13269, the Lahontan Water Board waives the requirements to submit a report of waste discharge (Water Code, sections 13260, subdivisions (a) and (b) and 13264, subdivision [a]) and establish waste discharge requirements (Water Code, section 13263, subdivision [a]) for the discharges of solid wastes derived from cleanup of burned areas as a result of wildfires, provided that the conditions set forth below are met. The conditions set forth in this Order are applicable only to the Class III MSW landfills identified in Finding No. 5, above, and to any dischargers who have established a temporary waste management unit to temporarily store and segregate waste from the cleanup of burned areas. These conditions do not apply to fire debris generated during non-state-of-emergency periods. Solid waste generated by "normal fires," such as those that regularly occur in urban and suburban areas during non-state-of-emergencies, may continue to be disposed at Class III landfills with approved waste load checking programs permitted by the Lahontan Water Board.

A. Conditions for Discharge of Fire Debris at Regulated Class III MSW Landfills within the Region.

1. Fire debris derived from cleanup of burned areas shall be discharged only to the portions of the MSW landfills underlain by engineered liners and leachate collection systems (see Finding No. 5) that satisfy the requirements of CCR, title 27, SWRCB Resolution No. 93-62, and Lahontan Water Board waste discharge requirements. Fire debris derived from emergency cleanup of burned areas shall also be isolated from areas of the landfill that are not lined. Fire debris does not include residual fire debris waste received by permitted Class III landfills from transfer/processing facilities and transformation facilities permitted by the California Integrated Waste Management Board.
2. Liquid hazardous wastes or "restricted hazardous wastes," as defined by California Health and Safety Code, section 25122.7, derived from cleanup of burned areas shall not be discharged to any Class III MSW landfill.
3. The discharge of fire debris derived from cleanup of burned areas shall not create or contribute to a condition of pollution or nuisance as defined in Water Code, section 13050.
4. Emergency/disaster related waste management and cleanup activities shall minimize or eliminate the discharge of any pollutants that could adversely affect the quality or beneficial uses of the waters of the state (refer to Attachments 1 through 3, Notice of Intent to Acknowledge Conditions Required, Notice of Intent to Establish Temporary Fire Debris Staging Operations, and Notice of Termination of Temporary Fire Debris Staging Operations, respectively).

5. The discharge of fire debris derived from cleanup of burned areas shall not create or contribute to conditions that violate the discharge prohibitions of the Basin Plan. The discharge shall not cause a violation of any applicable water quality standard for receiving waters adopted by the Lahontan Water Board, or the State Water Board, as required by the Federal Water Pollution Control Act (Clean Water Act).
6. Food wastes, animal carcasses, and other putrescible wastes derived from cleanup of burned areas shall be covered to ensure that there is no threatened or actual condition of pollution or nuisance, as defined in Water Code, section 13050.
7. "Mixed wastes" (as defined in Finding No. 9 of this Order) derived from cleanup of burned areas shall be separated and recycled when appropriate.
8. The following categories of fire debris derived from burned areas may be discharged as alternative daily cover (ADC) to a Class III MSW landfill:
 - a) Solid wastes that are classified as inert wastes (per CCR, title 27, section 20230);
 - b) Solid wastes that meet the criteria for ADC (per CCR, title 27, section 20690 et seq.); and
 - c) Solid wastes identified by the Local Enforcement Agency (LEA) and approved by Lahontan Water Board staff as being suitable for use as ADC.
9. For management of emergency/disaster related waste, the following conditions apply:
 - a) Emergency/disaster related waste management must prevent the direct or indirect discharge of emergency/disaster related wastes to any surface waters of the state (including ephemeral streams and vernal pools).
 - b) Emergency/disaster related waste management operations shall be performed in a manner that does not create, or contribute to a condition of pollution or nuisance.
 - c) Emergency/disaster related waste management operations shall be performed in a manner that does not create, or contribute to conditions which violate the waste discharge prohibitions promulgated in the Basin Plan.

- d) Emergency/disaster related wastes shall be managed in a manner that does not cause corrosion, decay, or otherwise reduce or impair the integrity of containment structures at any waste management unit.¹
- e) Emergency/disaster related wastes shall be managed in a manner that does not mix or commingle other wastes that can produce a violent reaction (including heat, pressure, fire, or explosion), that can produce toxic byproducts, or that can produce any reaction products requiring a higher level of containment, or results in the mixture being classified as a restricted waste.²
- f) Liquid hazardous wastes or "restricted hazardous wastes"³ cannot be discharged to municipal solid waste (MSW) landfills, temporary waste piles, or temporary surface impoundments.
- g) Inert wastes⁴ that are suitable for reuse or recycling do not require permanent disposal at a classified waste management or disposal facility (i.e., permitted landfill).
- h) Waste shall only originate from wildfire-impacted areas of Los Angeles, San Bernardino, Kern, Inyo, Mono, Tuolumne, Alpine, El Dorado, Placer, Nevada, Sierra, Lassen and Modoc Counties. This waste shall be discharged for treatment and permanent disposal only into:
 - i) Waste management or treatment units (e.g., liquid wastes into wastewater treatment plants) as allowed by WDRs issued by the Lahontan Water Board; or
 - ii) Solid waste management units or disposal facilities (e.g., solid wastes into Class III MSW landfills underlain with engineered composite liners and leachate collection systems and that satisfy the requirements of State Water Board Resolution No. 93-62); or
 - iii) As allowed by valid WDRs issued by the Lahontan Water Board for other categories of waste management units.

10. **Required Notification to the Lahontan Water Board:** Within 10 days of discharging fire debris waste, the Dischargers must acknowledge compliance with the requirements of this waiver (Attachment No. 1, Notice

¹ Pursuant to California Code of Regulations, title 27, section 20200, subdivision (b)(1).

² Pursuant to California Code of Regulations, title 27, section 20200, subdivision (b)(2).

³ Defined in California Health and Safety Code, section 25122.7.

⁴ Defined in California Code of Regulations, title 27, section 20230.

of Intent to Acknowledge Conditions Required). Within 60 days after accepting fire debris from areas for which the Governor declared a State of Emergency, the owner/operator of the landfills listed in Finding No. 5 shall submit a technical report describing the volume of fire debris discharged to the landfill.

B. Conditions for Discharge of Wildfire Wastes to Temporary Waste Staging Areas at Regulated Class III MSW Landfills in the Region.

In addition to Conditions 1 through 4 in Section A of this Order, any person discharging fire debris from burned areas to temporary staging areas at a regulated municipal solid waste landfill shall also comply with the following conditions:

1. **Required Notification to the Lahontan Water Board:** The discharger shall submit a fully executed Notice of Intent to Establish Temporary Fire Debris Staging Operations (Attachment No. 2) to the Executive Officer of the Lahontan Water Board within 30 days of the initial discharge of any waste piles established under this Order. The discharger shall submit a fully executed Notice of Termination of Temporary Wildfire Waste Staging Operations (Attachment No. 3) to the Executive Officer within 10 working days of completing removal of all waste and restoring the site to its original condition.

All wastes shall be removed and the site returned to its original condition within six months of a declaration of emergency by the Governor or prior to filing a Notice of Termination, whichever occurs first, or as required by the Lahontan Water Board.

2. **Liner:** Heavy gauge plastic sheeting (not less than 20 mils thick) or other impermeable material (e.g., asphalt, concrete, compacted Class II roadbase, etc.) shall be installed prior to establishing a temporary waste pile to protect all natural geological materials from contact with the waste or its leachate.
3. **Run-on/Runoff Protection:** The discharger shall prevent surface run-on from contacting fire debris and shall prevent erosion and transport of soils containing fire debris by surface runoff from all waste piles established under this waiver. All runoff from the fire debris waste piles must be fully contained and properly disposed. The discharger shall employ applicable best management practices (BMPs) to the maximum extent practicable for stormwater conveyance and control.
4. **Groundwater Protection:** All waste derived from cleanup of burned areas shall be placed at least five feet above the highest anticipated groundwater elevation.

5. **Surface Water Protection:** All waste piles derived from cleanup of burned areas shall be located not less than 100 feet from any surface water identified in the Water Quality Control Plan for the Lahontan Region (Basin Plan).
6. **Flood Protection:** All waste derived from cleanup of burned areas shall be protected from flooding and inundation.
7. **Clean Closure of Temporary Waste Piles:** Wastes discharged to temporary waste piles at regulated landfills under this waiver, together with any materials used to contain the temporary waste piles, shall be removed from the temporary storage/staging location within six months of a declaration of emergency by the Governor or prior to filing a Notice of Termination, whichever occurs first, or as required by the Lahontan Water Board. Alternatively, the discharger shall file an amended Report of Waste Discharge and obtain amended waste discharge requirements from the Lahontan Regional for any waste piles that will continue to exist after the expiration of this waiver. The temporary waste staging site shall be restored to its original state. All wastes shall be removed and the site returned to its original condition within six months of a declaration of emergency declared by the Governor or prior to filing a Notice of Termination, whichever occurs first, or as required by the Lahontan Water Board.

C. **Conditions for Temporary Waste Staging Areas NOT Located at a Regulated Class III MSW Landfill Identified in Finding No. 5 of This Order.**

1. **Temporary Waste Piles:** The discharge of solid wastes into temporary waste piles located at temporary staging areas shall comply with Conditions 1 through 4 of Section A of this Order. Temporary waste piles at transfer/processing facilities or transformation facilities that are permitted by the California Integrated Waste Management Board do not have to comply with this Order.
2. **Required Notification to the Lahontan Water Board:** Any person proposing to discharge fire debris from burned areas to temporary waste staging areas that are not located at a regulated solid waste management facility identified in Finding 5, shall submit a signed/completed Notice of Intent to the Executive Officer to Establish Temporary Fire Debris Staging Operations (Attachment No. 2), within 30 days of the initial discharge of any wildfire waste pile(s) established under this Order. The discharger shall submit a signed/completed Notice of Termination of Temporary Fire Debris Staging Operations (Attachment No. 3) to the Executive Officer within 10 working days of completing removal of all wildfire waste and restoring the site to its original condition. All wastes shall be removed within six months of a declaration of emergency by the Governor or prior

to filing a Notice of Termination, whichever occurs first, or as required by the Lahontan Water Board.

3. **Cover:** All temporary waste staging units/piles shall be covered with either a heavy gauge plastic or other material that meets the classification criteria for wastes described in Finding 9 of this Order. A material that would be classified as a designated waste cannot be utilized for daily or intermediate cover at a temporary waste staging area. Cover on the temporary waste staging units/piles shall prevent rainwater infiltration and runoff, and shall control fugitive dust, vectors, odors, blowing litter, and scavenging.
4. **Liner:** Heavy gauge plastic sheeting (not less than 20 mils thick) or other impermeable material (e.g., asphalt, concrete, compacted Class II roadbase, etc.) shall be installed prior to establishing a temporary waste pile to protect all natural geological materials from contact with the waste or leachate.
5. **Surface Water Protection:** All waste piles derived from cleanup of burned areas shall be located not less than 100 feet from any surface water identified in the Basin Plan.
6. **Precipitation and Drainage Controls:** Temporary waste piles shall be designed, constructed, and operated to limit ponding, infiltration, inundation, erosion, slope failure, and washout to the greatest extent possible. Surface drainage from outside the temporary waste pile shall be diverted away from the waste piles through implementation of BMPs for stormwater control and conveyance to the maximum extent practicable.
7. **Return/Ponded Water:** A discharger shall submit written notification to the Executive Officer 30 days prior to initiating the discharge of return water or ponded water contained within the temporary staging area if the discharge is to a location other than a sanitary sewer system. Based on the Executive Officer's determination, the discharger may receive: 1) waste discharge requirements; 2) a waiver of waste discharge requirements; or 3) a written determination that the disposal of the return water or ponded water is not subject to regulation by the Lahontan Water Board.
8. **Public Notification Requirement:** The discharger shall post at least one clearly visible sign (in English) listing the following minimum information: a) project name, b) brief project description, and c) operator name and phone number. The discharger shall post additional signs, as necessary, in languages other than English to more effectively communicate the minimum contact information, as listed above, to the local community. The

sign(s) shall be maintained, as required, to keep them legible and shall remain in place while temporary waste piles remain on site.

9. **Closure of Temporary Waste Piles:** Wastes discharged to temporary waste staging areas for the purpose of storage and treatment, as established under this Order, and any materials used to contain the temporary wastes, shall be removed for disposal in accordance with applicable federal, state, and local requirements prior to the expiration of this waiver. The owner/operator of the temporary waste staging area shall submit a completed and signed Notice of Termination of Temporary Fire Debris Staging Operations (Attachment No. 3) to the Executive Officer within 10 working days of completing removal of all wildfire waste and restoring the site to its original condition. All wastes shall be removed within six months of a declaration of emergency declared by the Governor or prior to filing a Notice of Termination, whichever occurs first.

BE IT FURTHER ORDERED THAT, this conditional waiver of statutory requirements in Water Code sections 13260, subdivisions (a) and (b), 13263-subdivision (a), and 13264 subdivision (a) shall remain in effect until **March 10, 2015**, unless the Lahontan Water Board takes action to extend, revise, or rescind these requirements.

BE IT FURTHER RESOLVED THAT, this conditional waiver is only in effect under a State of Emergency delivered by the Governor that results in fire debris in the area and which needs prompt and proper disposal/management. This waiver expires when the Governor declares the State of Emergency has expired or the Lahontan Water Board takes action to terminate enrollment of an individual or all dischargers/Units temporarily granted a waiver.

BE IT FURTHER RESOLVED THAT, the requirements of this conditional waiver apply only to waste derived from the emergency cleanup of areas burned by wildfires and subject to a proclamation of a State of Emergency. All discharges of waste not associated with cleanup of fire debris from burned areas shall comply with discharge prohibitions and discharge specifications established in waste discharge requirements for the solid waste management units identified in Finding No. 5 of this Order.

BE IT FURTHER RESOLVED THAT, the Lahontan Water Board may issue specific waste discharge requirements for discharges of waste derived from burned areas.

BE IT FURTHER RESOLVED THAT, any waiver of waste discharge requirements is conditional; may be terminated at any time; does not authorize or excuse an illegal discharge; does not preclude the need for any permits, licenses, or authorizations which may be required by other state or local governmental agencies or landowners; and does not preclude the Lahontan Water Board from administering enforcement remedies pursuant to Water Code, section 13300, et seq.
